

Casino Technology is 10!

Casino International would like to wish **Casino Technology** a very happy 10th anniversary – here's to the next 10 years of growth and success...

Casino Technology has come a long way in a relatively short time, to become a respected and highly-regarded supplier of casino solutions. They are about more than just slot machines these days – their product offering has broadened to include Video Slots, Multiplayer Electronic Table Games, Automatic and Semi-Automatic Electronic Roulette Systems, Jackpot Systems, Casino Management systems, interior and exterior decor and accessories and more.

The company now has a beautiful custom-built building in Sofia, Bulgaria, to work from; it is both a manufacturing base and their head office. The new building has allowed the company to increase their production output and guarantee the maintenance of the quality customers have come to expect

from Casino Technology products.

With more than 50,000 units installed in casinos across 50 countries on five continents, Casino Technology's story is certainly one of success. They can be seen at major international trade shows around the world, and have enjoyed increasing success in South America, Asia and Africa, and of course their native Eastern Europe. Next, the company says, is North America and South-East Asia.

Casino Technology is a member of the following key worldwide industry organizations:

- Gaming Standard Association (GSA)
- Association of Gaming Equipment Manufacturers (AGEM)
- Bulgarian Trade Association of Manufacturers and Operators in the Gaming Industry (BTAMOGI)
- Bulgarian Trade Commercial Chamber (BTCC)

The Company is a sponsor of Slot Academy and various industry focussed educational programs.

As part of the company's celebrations of the 10-year landmark, a range of new products was unleashed at the recent BEGE show in Sofia; video

slots, multiplayers, jackpots and more were on show for delighted customers at this fast-growing trade show.

Video slots were on show in the high-end Gemini Sense cabinet and the brand-new Tangra Touch cabinet wowed the crowds; a multi-level jackpot system called Alchemic Fusion was on show too.

Casino Technology says that the Tangra Touch cabinet has one of the biggest player interaction areas on the market, with larger and more recognisable buttons, easy to handle peripheral devices along with the 'Eye see' technology with a third additional 10" monitor for TV or other entertainment broadcasts and promotional features.

Visitors to BEGE were also able to see the unique multiplayer system PLAYME, whose patented concept combines the automatic roulette built in the cabinet of a grand piano. After the success of the first PLAYME model, Casino Technology is launching an even bolder solution where the automatic roulette is linked to configuration of two grand pianos!

The PLAYME concept sums up Casino Technology – always innovating, always different, and always fun!
