

Casino Technology hits jackpot

Casino Technology celebrates its 10th anniversary with the release of 10 exciting titles

As part of its 10-year anniversary, which Casino Technology is celebrating with a year-long party of events, the company is also looking to demonstrate its latest stunning new product line-up.

Appropriately, 10 new releases will be presented in the key markets of Romania, Czech Republic and Hungary during a series of trade events in September.

Chinese Gate Treasure, Girls with Diamonds, Viva Cuba Libre, Super Market, Rumble in the Jungle and African Moon, alongside the latest version of the popular multi-game, Gamopolis II, are some of the titles to be demonstrated for the first time in Europe this month. Encompassing a wide variety of math concepts, Casino Technology's game design team aims to provide a greater choice to operators for setting the ideal slot mix, depending on their specific location, type of gaming hall and customers' demands.

Free spins series combined with rounds of wins are still a must, but some of the latest releases include even greater variety of features, aiming to ensure higher attraction and longer playing time. Rumble in the Jungle is a 25 line video slot featuring three levels of progressive jackpots during the free games. The video slot features different rates of volatility in normal games and in free games.

African Moon also has a three-level progressive jackpot feature, which is defined by different winning combinations. Three different kinds of animal symbols can fill the screen and the player may win one of the jackpot levels: Bronze, Silver or Gold.

All the games are available in the Gemini cabinet as well as in its enhanced version Gemini Sensa. They feature wide LCD screens, attractive 3D-graphics, engaging soundtracks and a range of additional features ensuring an interactive and comfortable environment for the player. Several video slots are also introduced through the latest slant-top offering from the company, Tangra Touch, powered by the new hardware platform Tough Ryder. The prototype series of Tangra Touch impressed audiences with its arresting design, solidity and class. Casino Technology has engineered a cabinet with exceptionally strong and solid construction, guaranteeing longer and comfortable play alongside trouble-free operation.

Celebrating its 10-year anniversary, Casino Technology is proudly showcasing the long awaited second release of its popular

Rumble in the Jungle is one of the 10 new titles to be shown around Europe at trade events in September. Catch up with Casino Technology and its new games in Romania, Hungary, Czech Republic and, of course, Bulgaria, at the BEGE Expo in October.

multi-game Mega Jack. The new version of the 'mega' selling title features a range of improvements in terms of security and functionality, including: enabled communication SAS modules, settings and statistics menus that have been modified for operator convenience and enhanced security features.

After taking part at Entertainment Arena in Bucharest, Gameexpo in Budapest and Forbes in Prague, Casino Technology will mark the culmination of the 10-year Anniversary celebrations during their domestic BEGE expo at the beginning of October with the launch of further new products and systems.

Eurocoin presents broad TFT solutions and service

Eurocoin is underlining its TFT range, which has been specifically selected to give the best possible options of TFT panel, housing, interface and touch options.

"We support Samsung, LG and AUO Glass giving options of standard and high viewing angle panels," said Garry Holland, European Technical Sales Manager for Eurocoin. "Through these brand partners we are able to offer customers multiple metalwork and mounting options providing off the shelf design solutions to suit any application and if something special is required, we provide a design service." All Eurocoin panels come with VGA input as standard and optional dual VGA-DVI, composite video and CGA inputs. All TFT solutions can be fitted with various touch

screen options, capacitive 3M, Resistive and SAW technologies. The TouchScape range is ELO SAW compatible with plastic bezel and a dual USB/Serial interface and available with multiple panel options and protective glass. A three year warranty is offered as standard. Eurocoin also offer the latest 22" widescreen LCD panels that are appearing in many new gaming devices. "New this year is our range of inverted TFT solutions," said Mr. Holland. "These have been developed to offer a high quality yet cost-effective solution for customers who wish to remove costly high viewing angle units without compromising on machine look and quality. There are a number of key OEMs already making the switch to inverted TFTs."

Holland-based Signs4U has installed a complete new multimedia system in Casino Gran Madrid; the system consists of 10 multimedia players and numerous LCD screens which are spread around the different casino areas. All players are connected to the existing casino network and are operated from only one centrally placed master station.

10 local jackpots are picked up by the system, this is combined with the multimedia contents and broadcasted (in real time) around the casino as well as the restaurants and bar areas. The system also displays the jackpot hits.

A special feature for Casino Gran Madrid is the visibility of available dinner tables in the restaurants and buffets and their expected waiting time. With this solution players can keep an eye on their reserved table on the LCD displays which allows them to spend the maximum time inside the casino and avoid waiting in the restaurant. The Signs4U multimedia solution features an easy to use interface from which you can create and update your own marketing messages including: advertising, promotions, special offers and competitions. These small and easy-to-store multimedia players are fully configurable and are capable of playing live feeds such as: TV, RSS, Internet, movie clips or pictures. On top of this, the jackpot odometer is always visible to players right across the casino floor. The jackpot data can also be broadcast externally over the Internet to a remote player from where the same multimedia information, including the real-time odometer, can be displayed.

The Gran Madrid Casino Group is seen by many in the industry as one of the most important casino groups in Spain. The major casino, Casino Gran Madrid, is based in Torreldones in the outskirts of Madrid. Casino Gran Madrid is renowned for its wide variety of services for dinner, drinks and entertainment as it offers three a la carte-restaurants, two buffet, five bars and a nightclub where performances and shows take place during the weekend. The gaming offering includes French and American Roulette, Black Jack, Stud and Circle Poker (Omaha and Texas Hold'em), Punto y Banca (Baccarat/Chemin de Fer) and over 215 slot machines, all in 4 areas: French Room, American Room, Diva's and Premium, and a private slot room.
