

PlayMe™

Type of product

Automatic roulette

Overview

Innovation, sensuality and passion come together in the unique avant-garde product PlayMe™ that Casino Technology will launch to the public at their booth 2433 at G2E, Las Vegas. PlayMe™ is an Automatic roulette multiplayer station, whose state-of-the-art design uses terminal multiplayer technology, implemented into grand piano cabinet.

This pioneering concept has been inspired by the belief of the Company that a synergy of Art, entertainment and high technologies is the new avenue for attracting players and keeping their interest longer. A successful game needs something more than a perfect mathematical model or a catchy prize system. That is why PlayMe™ roulette attracts players not only with the options for fast and risky betting, along with comfortable play, but also enchants them with the unusual interactive tools and bonus to enjoy the music and being in touch with the live performers.

PlayMe™ ensures simple operation, easy maintenance and great players comfort, along with flexible options in utilizing the casino floor. Additional player terminals could be remotely linked and located for instance at the near bar countertop or elsewhere in the premises of the casino. This creates a unique atmosphere allowing visitors to enjoy, relax, and socialize while playing.

System components

- Automatic roulette wheel

PLAYME™ uses an automatic roulette wheel, where the innovative, patented solution for automatic ball rotation ensures reliable operation with minimum downtime for service and maintenance at a minimum cost. Specially developed optical sensors detect and follow the rotation of the ball from the beginning of the game to the end, including the detection of the winning number. This guarantees the greatest protection level against manipulation or compromise of the results from external factors.

- Betting terminals

Electronic bet placement is achieved through individual betting terminals with touch screen technology. The design has been developed for both Single Zero 'European' or 'French' roulette, and Double Zero 'American' roulette, and allows the placing of traditional bets (on a chosen number), and block combinations - known in the classic roulette game as 'call bets'.

The terminals are multilingual and are equipped with leather armrests. Their ergonomic design also allows a spacious and comfortable playing position and a natural monitor-viewing angle.

- Roulette cabinet

The cabinet of the PLAYME™ is a working grand piano, with an automatic roulette wheel mounted in the lid and with betting terminals arranged around it.

- Configurations

PLAYME™ is offered with five players terminals. Additional stand-alone betting terminals could be positioned remotely and linked to the wheel of the main unit. The modular concept provides unlimited options in optimal utilization of space depending on specific size and requirements of the premises.

PlayMe™
